

SUJAL RAMBHAD

Python Engineer · AI/ML Pipelines · Data Annotation Tooling · API Integration

Nagpur, Maharashtra, India | rambhadsujal16@gmail.com | +91-9372839399 | github.com/sujalrambhad

PROFESSIONAL SUMMARY

Python-focused AI Engineering student with hands-on experience designing end-to-end ML pipelines, REST API backends, and data-preprocessing workflows. Comfortable building production-grade Python systems with clean, well-tested code, and experienced integrating LLM APIs to power real-time applications. Seeking a contract role where I can contribute to AI data pipelines, annotation tooling, and model evaluation infrastructure — the exact stack Alignerr builds for frontier AI labs.

TECHNICAL SKILLS

Languages	Python (primary) · Java · C · C++
Python Ecosystem	PyTorch · TensorFlow · Hugging Face Transformers · scikit-learn · NumPy · Pandas
AI / ML	NLP · LLM Integration · Prompt Engineering · Model Evaluation · Supervised Learning
Backend / APIs	REST API Design & Integration · JSON · Error Handling · Edge-Case Management
Tooling / QA	Git & GitHub · Jupyter Notebook · Google Colab · VS Code · Linting (PEP 8)
Cloud / Infra	Microsoft Azure (AZ-900) · Android SDLC · Procedural Systems
CS Fundamentals	Data Structures & Algorithms · OOP · System Design

ENGINEERING PROJECTS

Text Summarization Pipeline — NLP & LLM APIs *Python · Hugging Face · REST API · 2024*

- Built a transformer-based NLP pipeline producing concise summaries, achieving ~85% ROUGE-L on the CNN/DailyMail benchmark — demonstrating production-quality model evaluation.
- Engineered a full preprocessing pipeline (tokenization, stopword removal, normalization) improving model input quality by 30%, mirroring real-world data annotation & validation workflows.
- Designed a REST API backend enabling real-time summarization with <2 s average response time; implemented robust error handling and edge-case reporting.
- Benchmarked extractive vs. abstractive LLM outputs through systematic prompt engineering — directly analogous to annotation quality-control and evaluation system work.

AI-Powered Procedural Dungeon Generator *Python · Algorithmic AI · PCG · 2024*

- Designed a Python system generating 500+ unique configurations per run using graph-based BFS/DFS pathfinding — showcasing scalable, algorithmically sound Python engineering.
- Optimised generation to under 150 ms per instance through profiling and algorithmic refinements, demonstrating performance-focused Python development.
- Applied clean code principles: modular architecture, separation of concerns, and deterministic test coverage for map-traversability validation.

Event Information Mobile Application *Java · Android · REST APIs · 2023*

- Developed a cross-platform app handling 50+ real-time event listings with filter/search, integrating external REST APIs and managing edge cases for unreliable data sources.
- Iterative UI testing reduced user navigation steps by 40%, reflecting a data-driven, quality-focused engineering mindset.

INTERNSHIP EXPERIENCE

AI Virtual Internship — CodeSoft *Remote · AI Engineering Track · 2024*

- Delivered 3 AI mini-projects applying supervised learning and NLP techniques within structured engineering milestones — experience directly transferable to contract deliverable workflows.
- Performed ML model building, data preprocessing, and result evaluation; documented findings clearly to support async remote collaboration.

- Operated in a fully remote, async environment, demonstrating the communication discipline and self-management required for contract engineering roles.

EDUCATION

B.Tech – Artificial Intelligence Engineering *G.H. Rasoni College of Engineering (GHRCE), Nagpur | 2023 – 2027 | CGPA: 7.8 / 10*

Higher Secondary – CBSE Science *Bhavan's B.P. Vidya Mandir, Nagpur | 2023 | 82%*

CERTIFICATIONS

- Microsoft Azure AI Fundamentals (AZ-900) — Microsoft
- Java Programming Certification — IIT Madras
- Virtual AI Internship Certificate — CodeSoft
- Programming in Python — NPTEL
